okta + ❍ ADAPTIVE SHIELD

The Integrated Solution for Fortified SaaS Security and Identity & Access Management

The threat landscape for SaaS security is vast as businesses rely on a multitude of SaaS apps. While these apps come with built-in security features, it is the company's responsibility to continuously fix any potential misconfiguration. SaaS Security Posture Management (SSPM) comes to solve this challenge by providing automated, continuous visibility and remediation for the company's SaaS stack security posture.

Harnessing the power of Adaptive Shield's SSPM solution together with Okta, we provide an integrated solution to manage your SaaS security configurations, enhance your Identity and Access Management, and strengthen governance for privileged access.

Benefits

Easily Manage Your SaaS Security Configurations

Measure and elevate your SaaS security posture by automatically assessing critical misconfigurations in your SaaS app's settings

- Measure security posture by Security Domain, by Application, by User and by Compliance Standard for an overall normalized posture score.

- Monitor and fix misconfigurations while they occur.

- Benchmark against compliance frameworks such as SOC II, ISO 27001, PCI-DSS, and industry best practices (NIST, CIS), etc.

Enhance Your Identity and Access Management

Implement Identity & Access Management best practices, such as validation of user's access control and authentication settings (MFA, password complexity, etc.), validation of role-based access management as opposed to individual-based access, validation of access governance, detection of configuration drifts, alignment with compliance policies and more, in order to:

- Identify apps and users that have local access that isn't governed by Okta.

- Securely manage your SaaS apps and user provisioning/de-provisioning lifecycle.

- Automate the assessment of Okta's built-in controls and verify that they are properly implemented for all users and apps.
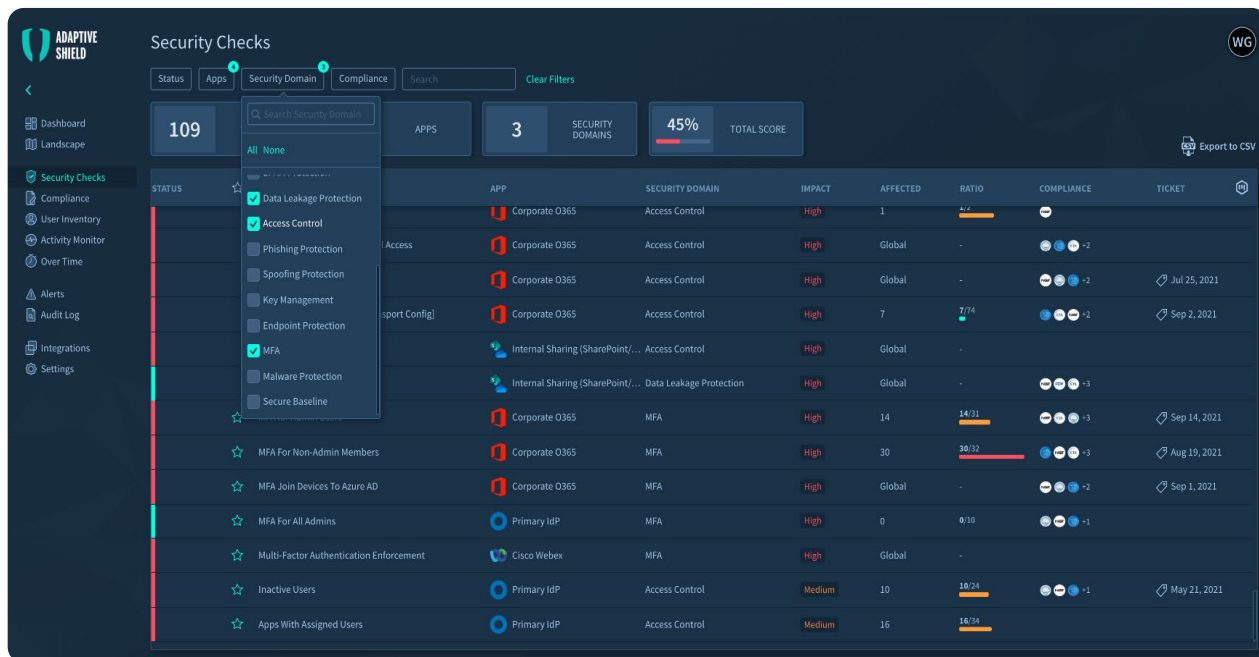

Strengthen Governance for Privileged Access

Reduce risk caused by over-privileged user access and streamline user-to-app access audit reviews by gaining consolidated visibility of user accounts, permissions, and privileged activities across your SaaS estate

- Track privileged and administrative activities that can impact your SaaS platform security posture and integrity.

- Identify users with privileged access through aggregated, contextual reports across your SaaS estate.

- Provide user-access context to manage permission trimming and prune dormant accounts by conducting intelligent access right-sizing without impacting productivity and business processes.
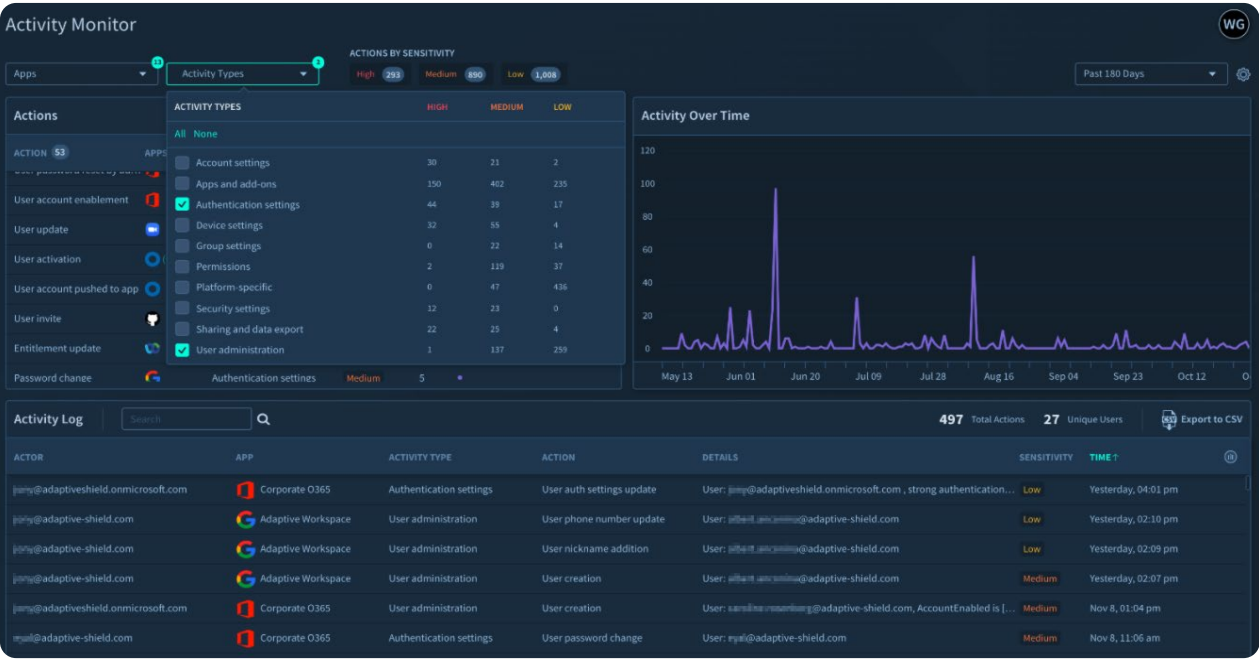

Technical Solution
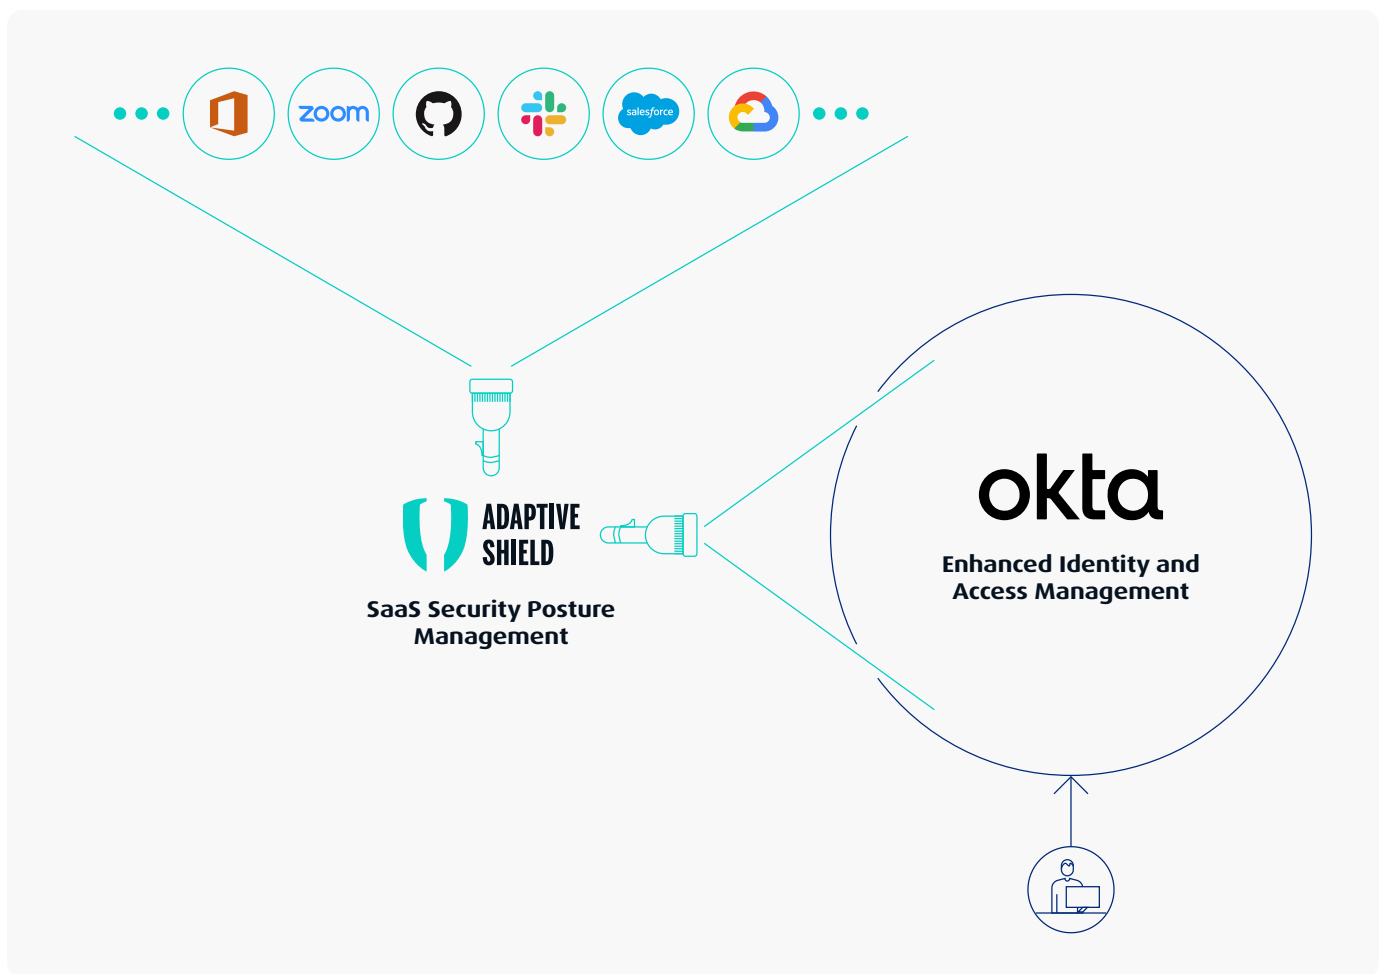

About Adaptive Shield

Adaptive Shield, the leading SaaS Security Posture Management (SSPM) company, enables security teams to see and fix configuration weaknesses quickly in their SaaS environment, ensuring compliance with company and industry standards. Adaptive Shield works with numerous Fortune 500 enterprises to help them gain control over their SaaS threat landscape.
